STILL SLEEK, STILL STYLISH

XPENG P7's lowered bonnet and streamlined silhouette combine with hidden door handles and a flattened underbody to create a truly elegant electric sports sedan.

P7 also features our signature X-Bot Face with dynamic LED lighting that communicates with you. Easily see when P7 is locked or unlocked, how much charge is left, and much more with just a quick glance.

INTO THE CABIN

Five luxurious seats greet you when you enter P7, with the two front seats offering heating and ventilation functions. You can choose premium Nappa leather or a leatherette finish to complete a cabin that also includes our impressive media system, Xopera.

ALWAYS AN ELECTRIC PERFORMANCE

P7 offers up to 576 km of range on a single charge, and its 86.2 kWh battery can charge from 10-80% in little as 29 mins.¹ Of course, P7 also supports Vehicle To Load (V2L) for those looking to make the most of their time away from home.

P7 comes in all-wheel drive and rear-wheel drive for different needs and driving preferences. The AWD version can accelerate from 0-100 km/h in just 4.1 s for those looking to get off to a quick start. For performances you can trust, Brembo brakes come as standard.

1. All technical data is subject to Type Approval. Data obtained under internal testing. All figures shown are representative of the maximum or fastest values achieved under test conditions from non-standard P7 models. The actual range may differ from the calculated WLTP range, depending on the driver's driving style, speed, number of occupants, vehicle load, outdoor temperature, air conditioner use, terrain, vehicle condition, etc.

USE YOUR IMAGINATION

Xmart OS is our dedicated operating system that lets you customize your in-car experience from the central control screen and digital dashboard, or even using voice commands. With Xmart OS, drivers can take control of performance settings, infotainment, navigation, climate, and much more.

P7 uses our Xmart OS 3D user interface to project the real world onto its central touchscreen, providing instant feedback for a more immersive driving experience. To keep things running smoothly, a Qualcomm Snapdragon 8155 chipset is used to power Xmart OS on the digital dashboard and central touchscreen.

P7 also comes with our new and improved “Hey XPENG” voice assistant that can understand and respond to complex commands from all four zones of the car, even without a network connection.

A HELPING HAND

XPILOT is our Advanced Driver Assistance System that uses a variety of cameras, radars, and sensors to offer support in three main areas: driving, parking, and safety.

XPILOT harnesses the power of high-definition millimeter-wave radars, ultrasonic wave sensors, driving cameras, and high-perception cameras to create a more seamless experience.

P7 uses an NVIDIA DRIVE Orin chip to power XPILOT's suite of functions that rely on 29 sensors placed around the vehicle.

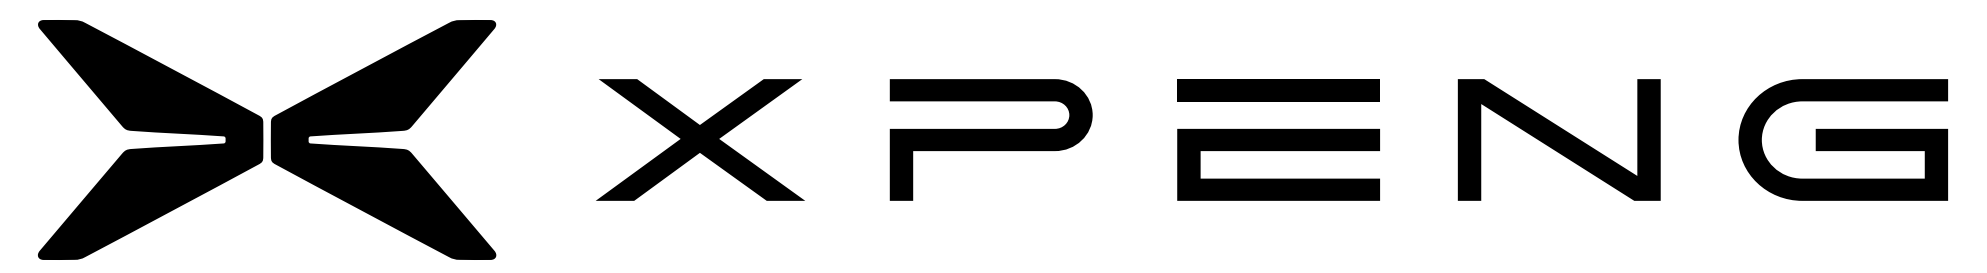

Of course, our engineers meticulously test each version of XPILOT using real vehicles as well as software simulations. This helps us collect data that helps us create a safer and smoother driving experience with each release.

You can find the full range of XPILOT functions on our intelligent technology page.

IT ONLY GETS BETTER

Over-the-air (OTA) software and firmware updates help improve Xmart OS, XPiLOT, and general driving performance over time.

These automatic updates keep your XPENG in peak condition, from adding features to Xmart OS to optimizing the air conditioning system. In many cases, OTA updates prevent you from taking unnecessary trips to the nearest service center.
